
(otherwise it will only assign the return value to the variable if var is found to be equal to the same value as the switch expression). For example `int switchVar = switch(1); switch (switchVar) { case 0: printf("0 "); break; case 1: printf("1 case 2: printf("-1 default: printf("-1 prints -1 for the last line, and 1 for the other lines (i.e. it does not assign the value to switchVar).`
